

## Statements from international contract fillers who use **BECOPAD**

*"The noticeably higher performance of **BECOPAD** really convinced me. It pays off."*

*"**BECOPAD** 115 C protects my membranes, particularly in the filtration of wines with borderline colloid content. That's what I call safe."*

*"The filter and filler always have to be 100 % sterile and hygienic. **BECOPAD** makes this possible."*

*"Cutting down on water during rinsing not only saves time but also money."*

# **BECOPAD**

State-of-the-art filter technology.  
Safe, drip-free, economic.

### Reasons for **BECOPAD**:

- 1** Safest filtration:  
**BECOPAD** 115 C – the membrane protector
- 2** High efficiency:  
Efficiency increased by at least 30 %
- 3** First-ever drip-free filtration:  
No product loss and a high standard of hygiene
- 4** Environmentally friendly:  
Saves 50 % of water during neutral rinsing and backwashing
- 5** Free from minerals:  
Full maintenance of valuable flavours and colour, even after sterile filtration
- 6** Produced from pure cellulose:  
Natural and 100 % biodegradable

**BECOPAD** is available from your local retailer:

National and international innovation awards

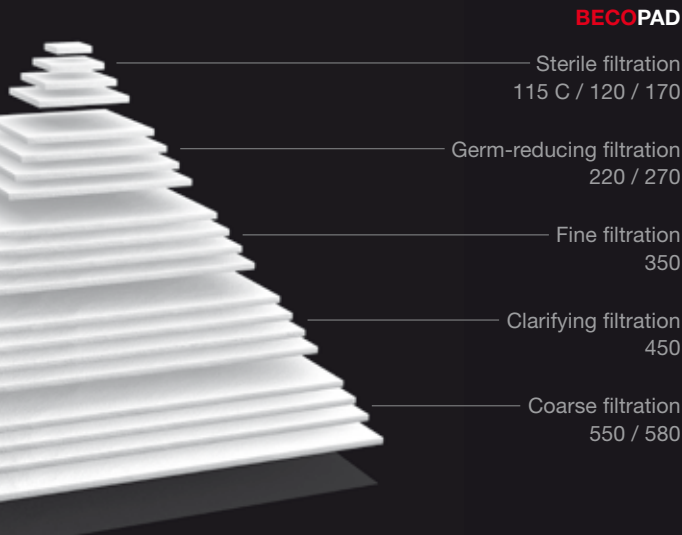

**The new safety.**  
In vino veritas.

Your aim is to produce basic and quality wine in consistently high quality. **BECOPAD** makes sure you can achieve this.

For the first time the revolutionary and innovative **BECOPAD** makes it possible to combine the strictest standards of microbiological safety with high filtration performance and hygiene. And this pays off.

**BECOPAD** is available in nine grades of clarifying sharpness. From coarse to sterile filtration.

**The new economic efficiency.**  
Drip-free and loss-free filtration.

The unique filter matrix and lack of mineral-containing components in the filter sheet make drip losses a thing of the past – a clean solution.

Filter rinsing, backwashing and re-application become much easier, saving both time and money.

**The new technology.**

Maximum microbiological safety is ensured, be it in the filtration of red wine with a **BECOPAD** 450 or **BECOPAD** 350 or in the bottling filtration of dry or white wines with residual sweetness with a **BECOPAD** 220, for example. The **BECOPAD** 115 C has been specifically developed to protect your membranes. It safely retains filtration-inhibiting colloids, thereby preventing your membranes from clogging.

**BECOPAD** in practice.

**BECOPAD** 115 C or **BECODISC** 115 C

**BECO** filter index measurement after **BECOPAD** 115 C.
