**BECOPAD wins Innovation-Award 2009**

And the winner is: „BECOPAD“

This was the great news on the second ACHEMA 2009 evening in Frankfurt. BEGEROW's innovation has won through amongst 100 applications in its category „mechanical systems“.

After the Rhineland-Palatinate Innovation Award this is the second important award within a short period for BEGEROW.

According to the *Process* trade magazine's laudator the sustainability of this depth filter medium was the feature that tipped the scales adding to the various benefits of this product. In times of respectful treatment of natural resources the special cellulose as a renewable raw material and main ingredient of BECOPAD is absolutely trend-setting. Also, the considerable power efficiency and the increased performance of more than 20% compared to standard filter sheets have convinced the jury.

BEGEROW's new depth filter medium, which is produced using the special *bepure* process, sets new standards in terms of end product purity and economic efficiency.

**About BEGEROW**

BEGEROW is a leading system provider of advanced liquid filtration solutions. With around 250 members of staff worldwide and its headquarters in Langenlonsheim/Germany, BEGEROW develops and produces technologically innovative filter media and filtration systems for the beverage and food industries as well as for chemical, pharmaceutical and industrial applications.
