Filtration in a nutshell

BEGEROW at the drinktec 2009 in Munich

BEGEROW stands for the customised process development of applications for the filtration of liquids – precisely adapted to the product to be filtered and the required batch sizes. In line with this year's drinktec in Munich, the consulting and service competence as full-line providers for beverage technology is being thrust into the spotlight.

BEGEROW is the reliable contact for beer manufacturers from the stabilisation to the filtration; fruit juice manufacturers trust in the production partner from the enzymation to the sterile filtration. Many years' experience in the reliable separation of alicyclobacillus ensures the required filtration results.

The extensive product portfolio ranges from depth filter sheets and stacked disc cartridges to filter cartridges as well as housings and fully automated filtration systems to filter aids and biotechnological products for the fining and stabilisation of beer, wine, juices and spirits. That also includes BECOPAD, the innovative depth filter medium which was successfully introduced on the market last year. BECOPAD consists of high-purity cellulose and is produced in a special „bepure“ process. This innovation enables a mineral-free filtration from the coarse to sterile filtration. Maximum microbiological safety and unrivalled exterior hygiene set new standards.

The BEGEROW team looks forward to your visit in hall A3, booth 334.

About BEGEROW

BEGEROW is a leading system provider for sophisticated solutions in the filtration of liquids. With approximately 250 employees worldwide and headquarters in Langenlonsheim (Germany) BEGEROW develops and produces technologically innovative filter media and filtration systems for the beverage and food industry as well as for the chemical, pharmaceutical and industrial sector.

BEGEROW was awarded the Innovation Prize 2008 from the German state of Rhineland-Palatinate for the new depth filter medium BECOPAD. More information at www.becopad.com.
