Useful tool for winegrowers

BEGEROW launches reference book on cartridge filtration

The new cartridge filtration manual from BEGEROW contains a wide range of practical tips for achieving good and economic filtration results in wine and sparkling wine production. In this comprehensive cartridge filtration documentation and training guide, BEGEROW passes on its long-standing experiences from collaboration with winegrowers and winemakers – in comprehensible language, and accompanied by numerous illustrations.

What are the key parameters for filter sizing and differential pressures? Or: What measures are suitable for rectifying early blockages? The two authors, product manager Elke Brett and application engineer Dieter Speh, discuss the key aspects of selecting suitable filter cartridges for different filtration applications. In addition to recommendations for cleaning, sterilisation and preservation of filter cartridges, the filter cartridge manual also deals with integrity tests for membrane filter cartridges.

Detailed overviews of the filter cartridge housings and filtration systems from BEGEROW and the BECO filter cartridge range round off the practical documentation. The filter cartridge manual complements the interactive 3D filter cartridge information film that is available as a teaching video and training medium on the BEGEROW website.

The "Filter Cartridge Manual – Practical Tips for Wine and Sparkling Wine Filtration" is aimed at all wine-producing companies. It is available in German or English and can be ordered by e-mail from claudia.schaefer@begerow.com at a price of € 19.90 plus postage. An extract with a brief description and an index is available from www.begerow.com/filtercartridgemanual.

About BEGEROW

BEGEROW is a leading system provider for advanced liquid filtration solutions. With around 250 staff worldwide and headquarters in Langenlonsheim, Germany, BEGEROW develops and produces technologically innovative filter media and filtration systems for the beverage and food industries as well as chemical, pharmaceutical and industrial applications.
